

FACT™

Fibronectin-Aggregan Complex Test

Molecular Discography

FACT™ measures the presence of the Fibronectin-Aggregan Complex (FAC) in a fluid specimen taken from patients with spine related pain

Clinical Need

- ❖ Exam and MRI Cannot Always Distinguish a Painful Disc
- ❖ Challenge for Physicians to “Pinpoint” the Source of Pain

Why FACT?

Clinical studies have shown that an inflammatory cascade of proteins leads to back and joint related pain

- ❖ FACT detects the presence of a unique bio-marker (FAC)
- ❖ FAC is a unique molecular complex reported in literature to be associated with painful inflammation
- ❖ FACT identifies symptomatic discs by the process of Molecular Discography

FACT™ is a CLIA-laboratory developed test service that measures the presence of a Fibronectin–Aggregan Complex and other related biomarkers.
