

# FACT™

## Fibronectin-Aggregan Complex Test

### Joint Diagnostic

*FACT™ measures the presence of the Fibronectin-Aggregan Complex (FAC) and other cytokines in a fluid specimen taken from patients with musculoskeletal pain*

#### Clinical Need

- ❖ MRI Cannot Identify all Painful Joint Abnormalities
- ❖ Challenge for Physicians to “Pinpoint” the Source of Pain

#### Why FACT?

Clinical studies have shown that an inflammatory cascade of proteins leads to back and joint related pain

- ❖ FACT detects the presence of a unique bio-marker (FAC)
- ❖ FACT can be used to test for the presence of inflammatory cytokines in the intra-articular joint space of a patient with musculoskeletal pain
- ❖ FACT can be used by physicians for testing synovial fluid from any joint

FACT™ is a CLIA-laboratory developed test service that measures the presence of a Fibronectin-Aggregan Complex and other related biomarkers.
